OFFICE OF

J. BRUCE MILLER

JEFFERSON COUNTY ATTORNEY

TWENTY SEVENTH FLOOR

CITIZENS PLAZA

LOUISVILLE, KENTUCKY 40202

(502) 584-4178

November 20, 1978

Dear Resident:

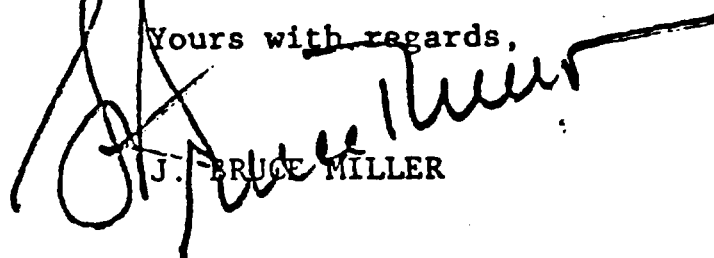

Information collected by SCS Engineers, Inc., a consulting firm for Jefferson County, has confirmed that the Lee's Lane Landfill is still generating methane gas. The gas migrates laterally underneath the ground surface at various depths. Various physical conditions, such as barometric pressure and perhaps temperature and groundwater elevation, have some influence on the gas pressure and the amount of flow.

The information SCS Engineers, Inc. collected indicates that the methane is still migrating from the landfill in an easterly direction. We are advising you that some degree of potential exists for this gas to get into your residence or other buildings.

The local authorities and the U. S. Environmental Protection Agency are in the process of trying to assure that a system is installed to stop the methane gas from migrating past the landfill property line as soon as possible. We will keep you advised as we obtain additional information.

A meeting has been scheduled for 7:30 P.M., Tuesday, November 28, 1978 at Riverside Baptist Church, 4317 Lee's Lane for the purpose of answering any question you might have regarding this situation.

Yours with regards,

J. BRUCE MILLER
